16 To begin our penetration testing for the target IP range 63.251.228.0/24, we need to follow the established step-by-step plan.
17
18 Team Lead, please proceed to request the names list of preliminary Metasploit modules from the Pentest agent according to: msf_modules/preliminary_modules.txt
19 . This will set the foundation for our initial penetration testing tasks.

116
117 Preliminary penetration testing tasks based on the received preliminary Metasploit modules:
118
119 1. **Network Discovery and Service Identification**
120     - Run `auxiliary/scanner/discovery/arp_sweep` to identify active hosts using ARP requests.
121     - Use `auxiliary/scanner/discovery/ipv6_multicast_ping` for discovering IPv6-enabled devices.
122     - Perform TCP and UDP sweeping using `auxiliary/scanner/portscan/tcp`, `auxiliary/scanner/portscan/syn`, `auxiliary/scanner/portscan/ack`, and `auxiliary/scanner/portscan/udp`.
123     - Deploy `auxiliary/scanner/discovery/udp_sweep` for a comprehensive UDP scan.
124
125 2. **Service Version Detection**
126     - Execute service version identification for common services:
127         - HTTP: `auxiliary/scanner/http/http_version`
128         - MySQL: `auxiliary/scanner/mysql/mysql_version`
129         - PostgreSQL: `auxiliary/scanner/postgres/postgres_version`
130         - SMB: `auxiliary/scanner/smb/smb_version`
131         - FTP: `auxiliary/scanner/ftp/ftp_version`
132         - SSH: `auxiliary/scanner/ssh/ssh_version`
133         - SNMP: `auxiliary/scanner/snmp/snmp_login`
134         - MSSQL: `auxiliary/scanner/mssql/mssql_ping`
135         - Oracle: `auxiliary/scanner/oracle/tnslsnr_version`
136         - RDP: `auxiliary/scanner/rdp/rdp_version`
137         - NFS: `auxiliary/scanner/nfs/nfs_mount`
138         - DHCP: `auxiliary/scanner/dhcp/dhcp_discover`
139         - POP3: `auxiliary/scanner/pop3/pop3_version`
```

```

140      - IMAP: `auxiliary/scanner/imap/imap_version`
141      - RTSP: `auxiliary/scanner/rtsp/rtsp_options`
142      - MQTT: `auxiliary/scanner/mqtt/mqtt_version`
143      - VNC: `auxiliary/scanner/vnc/vnc_none_auth`
144      - SMTP: `auxiliary/scanner/smtp/smtp_version`
145      - RSSYNC: `auxiliary/scanner/rsync/rsync_listmodules`
146
147 3. **Vulnerability Scanning and Miscellaneous Checks**
148  - Check for default Tomcat manager credentials using `auxiliary/scanner/http/tomcat_mgr_login`.
149  - Enumerate DNS information with `auxiliary/gather/dns_info`, `auxiliary/scanner/dns/dns_enum`, and perform SNMP enumeration with `auxiliary/scanner/snmp/snmp_enum` and `auxiliary/scanner/snmp/snmp_enumusers`.
150  - Discover directory listings and potential sensitive directories using `auxiliary/scanner/http/dir_scanner`, `auxiliary/scanner/http/dir_listing`.
151  - Check WebDAV accessibility with `auxiliary/scanner/http/webdav_scanner`.
152  - Probe SMTP for user enumeration with `auxiliary/scanner/smtp/smtp_enum`.
153
154 Please execute these tasks carefully and securely, ensuring that each scan is documented with its findings for further analysis. Let me know once you have completed these tasks.

979 TASK: Execute network discovery and service identification scans on IP range 63.251.228.0/24 using Metasploit modules;
980 RESULT:
981 1. **ARP Sweep**: Successfully executed. Scanned all 256 hosts.
982 2. **IPv6 Multicast Ping**: Executed with continuous multicast pings across the subnet; logs indicate proper initiation of multicast pings.
983 3. **TCP Scan**: Executed but reached time limit. Output indicates numerous 'TCP UNFILTERED' statuses for various IPs and ports.
984 4. **SYN Scan**: Executed but reached time limit. Similar to TCP scan, showing extensive unfiltered statuses.
985 5. **ACK Scan**: Executed, and results show various TCP unfiltered statuses.
986 6. **UDP Scan**: Due to loading or execution error, the UDP scan was not conducted successfully.
987 7. **UDP Sweep**: Successfully executed and completed scanning of all 256 hosts.
988
989 These results provide a detailed overview of network topology and active services across the subnet, although some errors were encountered with UDP scanning .
. Further analysis and corrective measures for incomplete tasks may be needed.

999 Pентest Agent, rework required: Please address the issues encountered with the UDP scan, ensuring it is executed correctly and the results are obtained.
Additionally, verify the timeout settings for TCP and SYN scans to ensure complete execution where possible.

1079
1080 TASK: Rework and ensure correct execution of the UDP scan, and address timeout issues with TCP and SYN scans on the 63.251.228.0/24 range;
1081 RESULT:
1082 1. **UDP Scan**: Attempted re-execution, but encountered issues with module loading and execution. No results were obtained as the module did not run correctly.
1083 2. **TCP Scan**: Re-execution reached time limits again without finalizing the scan. The issue with timeouts persists.
1084 3. **SYN Scan**: Similar to the TCP scan, this too reached the limit without completing. Timeout issues are evident.
1085
1086 The rework did not resolve the issues as anticipated, specifically with the UDP scan. The TCP and SYN scans also continue to face timeouts, indicating potential adjustments needed for time settings or module parameters. Further corrective action and technical adjustments may be required.

1104 team_lead (to chat_manager):

1105

1106 Now that the preliminary network discovery and service identification tasks are completed (despite some limitations), we will proceed to the next phase of our penetration testing. This involves more focused testing based on the initial findings and additional auxiliary modules that can help us uncover deeper insights about the target system.

1107

1108 Please proceed to request the auxiliary modules list from the Pentest agent according to the path: msf_modules/auxiliary_modules.txt. This will provide us with the necessary tools to continue our penetration testing based on identified network services and vulnerabilities.

1172
1173 Based on the identified preliminary findings and the auxiliary Metasploit modules available, let's classify and prioritize the tasks for focused penetration
testing.
1174
1175 ### Focused Pentesting Tasks and Classified Modules:
1176
1177 1. **Web Server and Application Exploits**
1178     - `auxiliary/admin/http/gitlab_password_reset_account_takeover` for potential GitLab vulnerabilities.
1179     - `auxiliary/admin/http/tomcat_mgr_login` to check Tomcat web management interfaces for weak passwords.
1180     - `auxiliary/scanner/http/webdav_scanner` to probe for WebDAV misconfigurations.
1181     - `auxiliary/admin/http/apache_mod_cgi_bash_env` to test for Shellshock vulnerabilities in CGI scripts.
1182     - `auxiliary/scanner/http/http_version` to gather versions of HTTP services for identifying vulnerable targets.
1183
1184 2. **Database Exploits**
1185     - `auxiliary/admin/mssql/mssql_sql` for executing SQL commands against exposed MSSQL databases.
1186     - `auxiliary/scanner/mysql/mysql_version` to identify MySQL service versions for known vulnerabilities.
1187     - `auxiliary/scanner/postgres/postgres_version` to test PostgreSQL services for version-specific issues.
1188
1189 3. **Network Services**
```

File - main

```
1190     - `auxiliary/scanner/ssh/ssh_version` and `auxiliary/scanner/smb/smb_version` to determine versions and configuration details.
1191     - `auxiliary/scanner/dns/dns_amp` to test for DNS amplification vulnerabilities.
1192     - `auxiliary/admin/smb/psexec_ntdsgrab` to attempt extraction of NTDS.dit via SMB.
1193
1194 4. **Remote Administration Tools (RATs)**
1195     - `auxiliary/scanner/vnc/vnc_none_auth` to check for unsecured VNC services.
1196     - `auxiliary/admin/dcerpc/cve_2020_1472_zerologon` to exploit the Zerologon vulnerability on target networks.
1197
1198 5. **Miscellaneous Exploits**
1199     - `auxiliary/admin/java_rmi_server` to exploit Java RMI services.
1200     - `auxiliary/scanner/rdp/rdp_version` to gather information and potential vulnerabilities in RDP services.
1201
1202 Each of these tasks is pivotal for a comprehensive security posture assessment and should be performed with the objective to uncover as many actionable vulnerabilities as possible, providing a pathway for remedial actions.
1203
1204 ### Execution Plan:
1205 Provide clear instructions to the Pentest agent to execute the classified tasks and document all findings with attention to detail for each of the above categories. Ensure testing respects company policies and ethical guidelines during exploitation phases.
1206
1207 After I receive confirmation from the Task Supervisor that these tasks have been added to the pentest plan, we can proceed with the implementation phase.

1216
1217 TASK: Classify and prioritize tasks for focused penetration testing based on identified systems and auxiliary Metasploit modules; RESULT:
1218
1219 **1. Web Server and Application Exploits:**
1220     - Explore potential GitLab vulnerabilities using `auxiliary/admin/http/gitlab_password_reset_account_takeover`.
1221     - Check Tomcat management interfaces for weak passwords with `auxiliary/admin/http/tomcat_mgr_login`.
1222     - Probe for WebDAV misconfigurations using `auxiliary/scanner/http/webdav_scanner`.
1223     - Test for Shellshock in CGI scripts via `auxiliary/admin/http/apache_mod_cgi_bash_env`.
1224     - Gather HTTP service versions to identify vulnerable targets using `auxiliary/scanner/http/http_version`.
1225
1226 **2. Database Exploits:**
1227     - Execute SQL on exposed MSSQL databases with `auxiliary/admin/mssql/mssql_sql`.
1228     - Identify MySQL versions using `auxiliary/scanner/mysql/mysql_version`.
1229     - Test PostgreSQL services for version-specific issues with `auxiliary/scanner/postgres/postgres_version`.
1230
1231 **3. Network Services Exploits:**
1232     - Determine versions and configurations of SSH and SMB services using `auxiliary/scanner/ssh/ssh_version` and `auxiliary/scanner/smb/smb_version`.
1233     - Test for DNS amplification vulnerabilities with `auxiliary/scanner/dns/dns_amp`.
1234     - Try extracting NTDS.dit via SMB with `auxiliary/admin/psexec_ntdsgrab`.
1235
1236 **4. Remote Administration Tools (RATs):**
1237     - Check for unsecured VNC services using `auxiliary/scanner/vnc/vnc_none_auth`.
1238     - Exploit Zerologon vulnerability on networks with `auxiliary/admin/dcerpc/cve_2020_1472_zerologon`.
```

```
1239
1240 **5. Miscellaneous Exploits:**  
1241     - Exploit Java RMI services with `auxiliary/admin/java_rmi_server`.  
1242     - Gather information on RDP services using `auxiliary/scanner/rdp/rdp_version`.  
1243
1244 Each task is pivotal for a comprehensive security assessment to uncover actionable vulnerabilities for remedial actions. The execution will respect company policies and ethical guidelines.

1262 team_lead (to chat_manager):
1263
1264 Now that the focused pentesting plan has been approved and set, the next step is to execute this plan comprehensively. I will instruct the Pentest agent to start implementing the tasks outlined in the detailed penetration testing plan.  
1265
1266 Pentest Agent, please proceed with executing the designated tasks for scanning and exploitation based on the specified Metasploit auxiliary modules. Focus on identifying vulnerabilities, misconfigurations, and potential security risks within the target range 63.251.228.0/24. Be sure to document all findings meticulously for each scan and test performed.  
1267
1268 Notify me once these tasks are completed or if any significant issues or urgent findings arise during the execution phase.
